$$\left(\frac{20}{\quad}\right) \quad \left(\frac{\quad}{20}\right)$$

B. $n = \dfrac{0,14(1-0,14)\cdot(1,65)^2}{(0,05)^2} = 131.$

A. $Q_1 = 50,5 + \dfrac{(\frac{1}{4}\cdot 40 - 8)}{10}\cdot 10 = 52,5$

$Q_2 = 60,5 + \dfrac{(\frac{2}{4}\cdot 40 - 18)}{10}\cdot 10 = 62,3$

$Q_3 = 70,5 + \dfrac{(\frac{3}{4}\cdot 40 - 29)}{8}\cdot 10 = 71,75$
